

Thank you very much for purchasing Magnesium cartridge (2 sets). Please read this user manual carefully in order to ensure the correct use of this appliance. Please save this manual in a safe place for future reference.

## Important! Please read carefully before using this appliance.

•This product is one part of the set of Magnesium and salt exclusive for the Magne Charger, and it cannot be used on its own. •In this manual, we only describe how to replace Magnesium. Usage and safety precautions are mentioned in the user manual of the Magne Charger. •Although this product can be stored in unused or unopened state for more than 10 years, avoid storing it in a hot or humid environment. •The warranty will not be valid if the appliance is stored or opened in a poor environment. •In the case of an emergency, sea water or urine can be used instead. However, since these contain contaminants, the power generation level will be lower than usual than with salt water, and USB charging will not be possible. •Charging is not possible in an environment that would cause salt water to freeze. •Although the magnesium hydroxide produced by electricity generation is harmless, please dispose of it as burnable garbage as it may clog the water pipe if thrown into the sink. Salt water may be poured down the drain as is with no problems. •Never attempt process or disassemble/remodel this appliance or the Magnesium.

## Regarding the timing of exchanging Magnesium and salt water

•When the lighting becomes weak or USB charging becomes impossible, exchange Magnesium and salt water.

※Because USB charging requires more power than lighting, charging may be impossible even when the light is still working.

•If you do not use the appliance for 24 hours, drain the salt water and wash the appliance.

## Contents

- Magnesium: 2 rods
- Salt: 4 bags
- User Manual / Warranty

## Specifications

### Specifications of Salt (per bag)

Salt / citric acid	15g/4g
--------------------	--------

### Specifications of Magnesium

Material	Magnesium
----------	-----------

※Including the use of citric acid increases the precipitation of the water content produced after power generation, which makes maintenance easier. As there is no influence to the power generation itself, salt can be used alone as well.
